Ranjith.R6@cognizant.com

Passionate and detail-oriented Full Stack Developer based in Chennai, India, with hands-on experience in building scalable web applications using Angular, Spring Boot, and MySQL. Skilled in both frontend and backend development, API integration, and microservices architecture. Proven ability to collaborate in agile teams and deliver high-quality solutions, including an online food delivery system project. Strong problem solving skills, a quick learner, and committed to continuous improvement and clean code practices.

Work Experience

Cognizant Experience

CHN CAT PAT Programmer Analyst Trainee- 3 Months (Jun 2025 - Oct 2025)

Project Description

Developed a scalable Online Food Delivery System using Angular 20, Spring Boot, and MySQL in a microservices architecture. The platform enables customers to browse menus, place orders, and track deliveries, while restaurants manage menus and order statuses. Implemented JWT-based authentication, role-based access, and API Gateway for secure communication. Designed responsive UI with Angular signals, lazy loading, and optimized performance. Built RESTful APIs for authentication, menu management, and order lifecycle. Ensured data integrity with normalized schemas and audit fields. Integrated OTP-based password recovery and applied security best practices.

Roles & Responsibilities

Developed Angular 20 UI (Login/Signup/Forgot Password with OTP, Menu, Cart, Orders) with reactive forms, guards, and JWT interceptors; optimized with lazy-loading, signals. Built Spring Boot microservices for auth, menu, orders, and transactions; implemented JWT-based auth, standardized error handling; designed normalized MySQL schemas with audit fields and indexing. Wrote unit and integration tests (Angular + Spring Boot), created API test suites (Postman), and maintained 80%+ coverage through CI pipelines. Collaborated in Agile sprints (Jira/Confluence), coordinated API contracts across microservices, and documented system workflows and API specs. Achieved ~30% faster loads via performance tuning; reduced auth-related issues by ~40% after payload and interceptor fixes; improved query performance with composite indexing.

Career Highlights

Received Cognizant Vibe Coding Badge for demonstrating project contributions. Successfully delivered secure and scalable modules for the Online Food Delivery System project, earning appreciation from mentors.
